

# BMS COLLEGE OF ENGINEERING

## TITLE :- AGRO BOT

### GUIDE:-

Dr M.Vasantha Lakshmi

Associate Professor

Electronics and Telecommunication Engineering

BMS COLLEGE OF ENGINEERING

### TEAM :-

Naivedya Shukla 1BM22ET037

Bharath Sai B 1BM21ET010

# AGENDA:

- Introduction
- Problem definition
- Methodology
- Working
- Expected Result
- Advantages and disadvantages
- References

# INTRODUCTION

- Using machinery in agricultural field.
- Disadvantages in conventional method of farming.
- Reduces physical labour.
- We cannot use huge machines for domestic purpose
- Small robots makes the job easier.
- Utilizing advanced technology.
- Power consumption is less.
- It is eco-friendly.

# PROBLEM DEFINITION

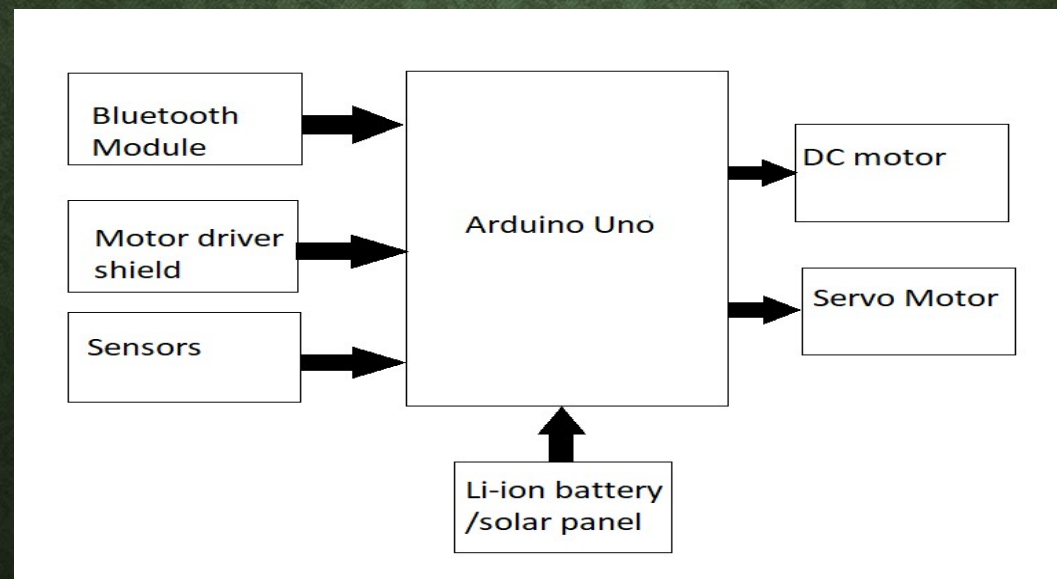

- Large machineries can't be used in small areas.
- Proper seed sowing is necessary.
- Human effort and time consuming.

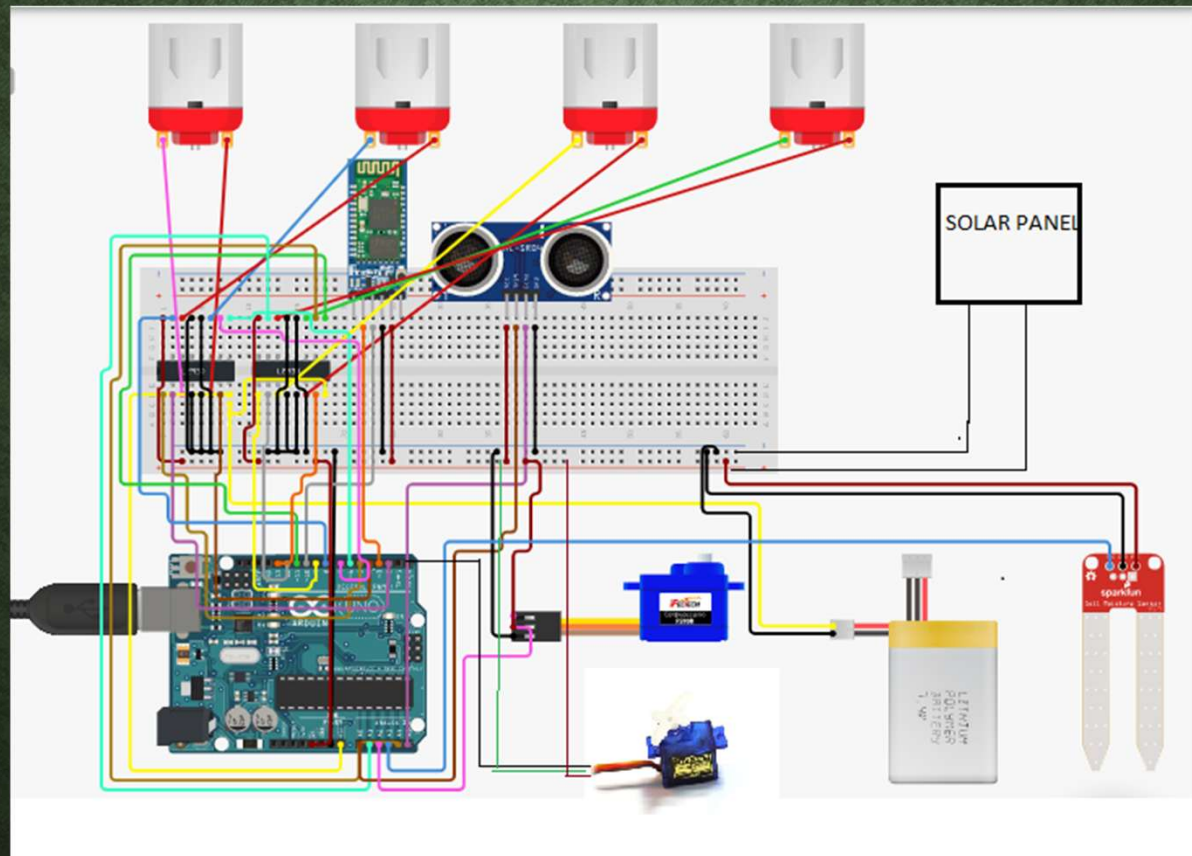

# METHODOLOGY

- The circuit diagram, circuit description, flow chart, and the block diagram are included in this section.
- The Bluetooth electronics app is used to control the robot.
- Seed sowing is done with the help of servo motor.

# CIRCUIT DIAGRAM

# COMPONENTS DESCRIPTION

## 1. Arduino Uno

## 2. Motor driver shield

## 3. Ultrasonic sensor

#### 4. Bluetooth module

#### 5. DC Motor

#### 6. Li-ion battery

## 7. Soil moisture sensor

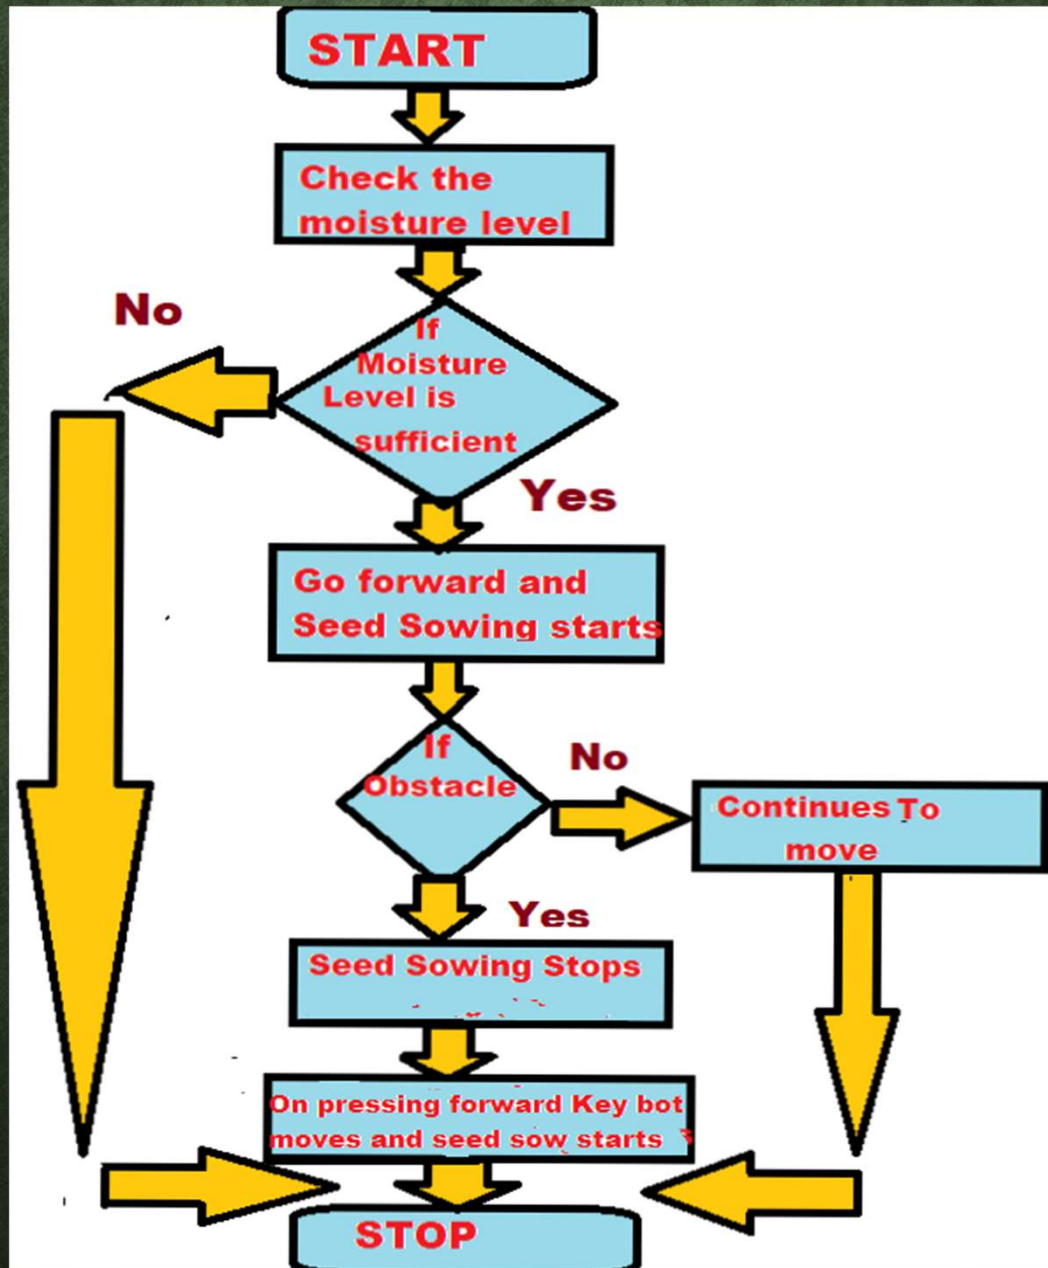

## 8. Servo motor

# FLOWCHART

# EXPECTED RESULTS

- Operated using automated seed sowing robot.
- Soil moisture checks the moisture content of the soil.
- Movement based on obstacle detection.

# ADVANTAGES AND DISADVANTAGES

## ADVANTAGES

- Reduces human effort and work.
- Low cost.
- Small in size and light weight
- The batteries have a good shelf life.
- Moisture sensor checks the moisture level of soil
- No complexity in operating .
- Solar Panels can be used to run the bot in future.

## DISADVANTAGES

- Minimal range of Bluetooth.
- Only small seeds can be sowed .
